

MySQL Server 8.0.33 Patch

Please read before you start	2
Preparation	2
Install the Patch	2
Restart the Services and check the installation	3

Please read before you start

This Patch is intended to upgrade an existing "MySQL for PSM Version 8.0.28" or "MySQL for PSM Version 8.0.30".

Before you start, you should perform a backup of PSM over the Web GUI of PSM.

If you run PSM on a virtual Server, you could also do a Snapshot instead.

Preparation

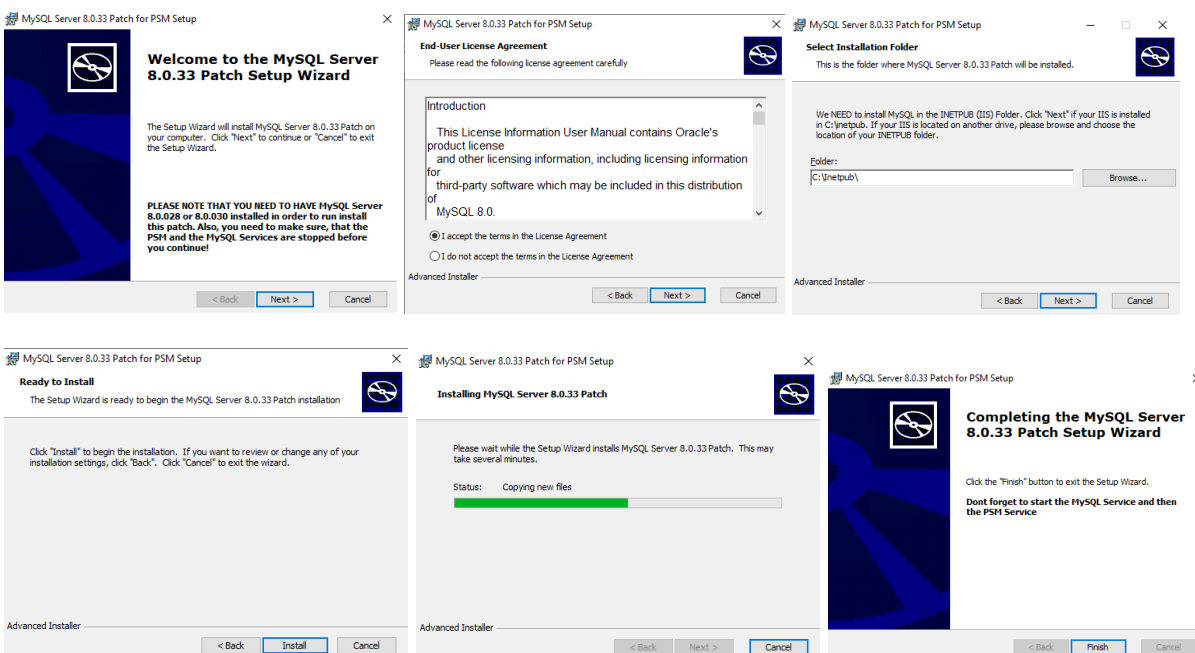

Stop the Windows Services in this order:

- PSM Scheduler Service
- MySQL

Install the Patch

Install the Patch by starting the .exe as Administrator. Click through the installation dialog.

Restart the Services and check the installation

Start the services again in the following order:

- MySQL Service
- PSM Scheduler Service

Check the installed programs. Both, the initial Version and the Patch should now be visible.

MySQL Server 8	Oracle Corporation	10.05.2023	864 MB	8.0.30
MySQL Server 8.0.33 Patch	Sysprint AG	10.05.2023	912 MB	8.0.33

Connect to PSM and logon. If you are able to connect and to log on, the Database Server is working. Otherwise you would get an error message.
